MANUAL

IL23/IL23R BINDING ASSAY KITS

Part # 64BDPIL23PEG & 64BDPIL23PEH

Test size: 500 tests (64BDPIL23PEG), 10,000 tests (64BDPIL23PEH) - assay volume: 20 µL

Revision: #02 of September 2023

Store at: ≤-60°C

This product is intended for research purposes only. The product is not intended to be used for therapeutic or diagnostic purposes.

ASSAY PRINCIPLE

The HTRF IL23/IL23R Binding Assay is designed to measure the interaction between IL23 and IL23R. Utilizing HTRF (Homogeneous Time-resolved Fluorescence) technology, the assay enables simple and rapid characterization of compound and antibody blockers in a high throughput format.

As shown in Figure 1, the interaction between IL23 and IL23R is detected by using anti-Tag1 labeled with Europium (HTRF donor) and anti-Tag2 labeled with d2 (HTRF acceptor). When the donor and acceptor antibodies are brought into close proximity due to IL23 and IL23R binding, excitation of the donor antibody triggers fluorescence resonance energy transfer (FRET) towards the acceptor antibody, which in turn emits specifically at 665 nm. This specific signal is directly proportional to the extent of IL23/IL23R interaction. Thus, compound or antibody blocking IL23/IL23R interaction will cause a reduction in HTRF signal.

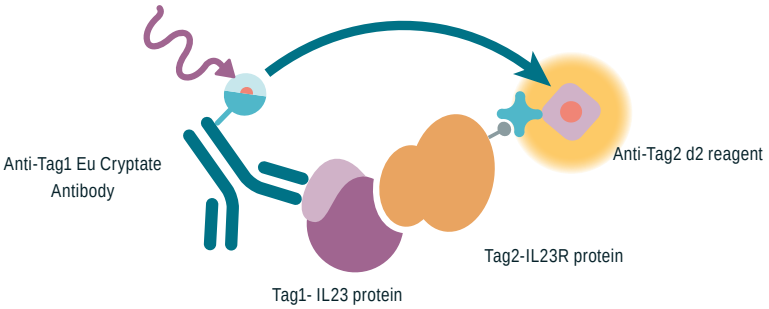

Figure 1: Principle of the HTRF IL23/IL23R assay.

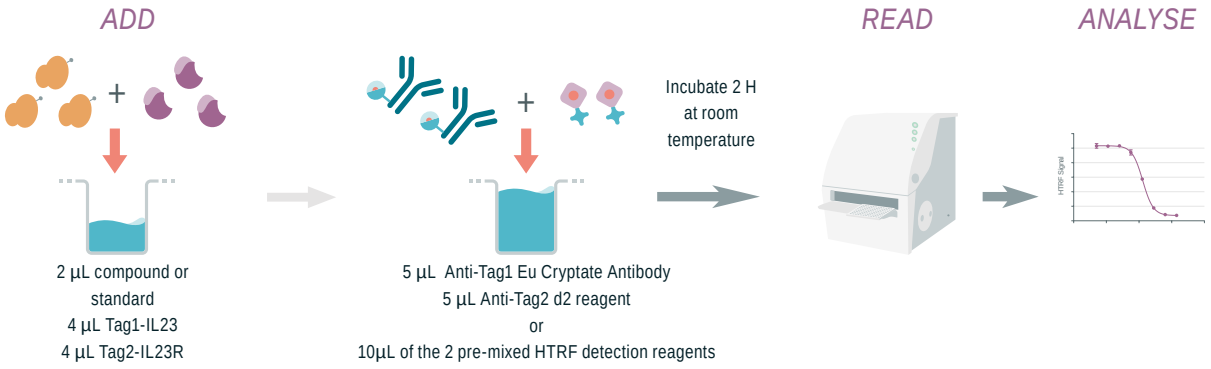
MANUAL AT A GLANCE



MATERIALS:

KIT COMPONENTS	500 TESTS CAT # 64BDPIL23PEG	10,000 TESTS CAT # 64BDPIL23PEH
Tag1-IL23 Lyophilized	1 vial	2 vials
Tag2-IL23R Lyophilized	1 vial	2 vials
IL23-IL23R standard Frozen	1 vial - 40 µL 5 µM	1 vial - 40 µL 5 µM
Anti-Tag1 Eu Cryptate Antibody- Frozen	1 vial - 50 µL 50X	1 vial - 1 mL 50X
Anti-Tag2 d2 reagent Frozen	1 vial - 50 µL 50X	1 vial - 1 mL 50X
PPI Europium Detection Buffer Frozen	1 vial - 20 mL	1 vial - 220 mL

For reading, an HTRF®-Certified Reader is needed. Make sure to use the set-up for Eu Cryptate. For a list of HTRF-compatible readers and setup recommendations, please visit our website at: www.revvity.com

For HTRF microplate recommendations, please visit:www.revvity.com

STORAGE AND STABILITY

Store the kit at ≤-60°C. Under appropriate storage conditions, reagents are stable until the expiry date indicated on the label.

Once reconstituted, tagged IL23 & IL23R stock solution may be frozen, and can be thawed only once. Once thawed (or reconstituted), anti-Tag solutions can be frozen once.
To avoid freeze/thaw cycles, it is recommended to dispense remaining stock solutions into disposable plastic vials for storage at ≤-60°C.

Thawed PPI Europium Detection Buffer can be stored at 2-8°C on your premises.

REAGENT PREPARATION

BEFORE YOU BEGIN:

- It is very important to prepare reagents in the specified PPI Europium detection buffer. The use of an incorrect buffer may affect reagent stability and assay results.
- Thaw the frozen reagents at room temperature.
- Before use, allow all reagents to warm up to room temperature then homogeneize buffer. It is recommended to filter buffers before use.
- The tagged protein solutions must be prepared in individual vials - DO NOT premix tagged solutions prior to dispensing.
- The anti-Tag solutions must be prepared in individual vials and can be premixed prior to dispensing.
- Compounds may be prepared in PPI Europium detection buffer.

TO PREPARE STOCK SOLUTIONS:

Take care to prepare stock and working solutions according to the directions for the kit size you have purchased.

500 TESTS		10,000 TESTS	
Tag1-IL23			
Reconstitute the Tag1-IL23 with 200 µL of distilled water in order to obtain a 10X stock solution. Mix gently, DO NOT vortex ! This stock solution can be frozen and stored at ≤ 60°C.			Reconstitute the Tag1-IL23 with 2 mL of distilled water in order to obtain a 10X stock solution. Mix gently, DO NOT vortex ! This stock solution can be frozen and stored at ≤ 60°C.
Tag2-IL23R			
Reconstitute the Tag2-IL23R with 200 µL of distilled water in order to obtain a 10X stock solution. Mix gently, DO NOT vortex ! This stock solution can be frozen and stored at ≤ 60°C.			Reconstitute the Tag2-IL23R with 2 mL of distilled water in order to obtain a 10X stock solution. Mix gently, DO NOT vortex ! This stock solution can be frozen and stored at ≤ 60°C.
IL23-IL23R Standard			
Thaw the IL23-IL23R standard. Mix gently. This 5X standard stock solution can be frozen and stored at ≤ 60°C.			Thaw the IL23-IL23R standard. Mix gently. This 5X standard stock solution can be frozen and stored at ≤ 60°C.
Anti-Tag1 Eu Cryptate Antibody			
Thaw the Anti-Tag1 Eu Cryptate Antibody. Mix gently. This 50X Anti-Tag1 Eu Cryptate Antibody stock solution can be frozen and stored at ≤ 60°C.			Thaw the Anti-Tag1 Eu Cryptate Antibody. Mix gently. This 50X Anti-Tag1 Eu Cryptate Antibody stock solution can be frozen and stored at ≤ 60°C.
Anti-Tag2 d2 reagent			
Thaw the Anti-Tag2 d2 reagent. Mix gently. This 50X Anti-Tag2 d2 reagent stock solution can be frozen and stored at ≤ 60°C.			Thaw the Anti-Tag2 d2 reagent. Mix gently. This 50X Anti-Tag2 d2 reagent stock solution. can be frozen and stored at ≤ 60°C.
PPI Europium Detection Buffer			
Thaw the PPI Europium Detection Buffer The thawed buffer can be stored at 2-8°C on your premises.			Thaw the PPI Europium Detection Buffer The thawed buffer can be stored at 2-8°C on your premises.

TO PREPARE TAG1-IL23 AND TAG2-IL23R WORKING SOLUTIONS:

Each well requires 4 µL of each Tag-protein.

500 TESTS		10,000 TESTS	
Tag1-IL23			
Dilute 10-fold the 10X stock solution (reconstituted reagent) of Tag1-IL23 with PPI Europium Detection Buffer: e.g. 200 µL of reconstituted Tag1-IL23 stock solution + 1800 µL of PPI Europium Detection Buffer.			Dilute 10-fold the 10X stock solution (reconstituted reagent) of Tag1-IL23 with PPI Europium Detection Buffer : e.g. 2 mL of reconstituted Tag1-IL23 stock solution + 18 mL of PPI Europium Detection Buffer.
Tag2-IL23R			
Dilute 10-fold the 10X stock solution (reconstituted reagent) of Tag2-IL23R with PPI Europium Detection Buffer : e.g. 200 µL of reconstituted Tag2-IL23R stock solution + 1800 µL of PPI Europium Detection Buffer.			Dilute 10-fold the 10X stock solution (reconstituted reagent) of Tag2-IL23R with PPI Europium Detection Buffer : e.g. 2 mL of reconstituted Tag2-IL23R stock solution + 18 mL of PPI Europium Detection Buffer.

TO PREPARE ANTI-TAG1 EU CRYPTATE ANTIBODY AND ANTI-TAG2 D2 REAGENT WORKING SOLUTIONS:

Each well requires 5 µL of each anti-Tag donor & acceptor reagents.

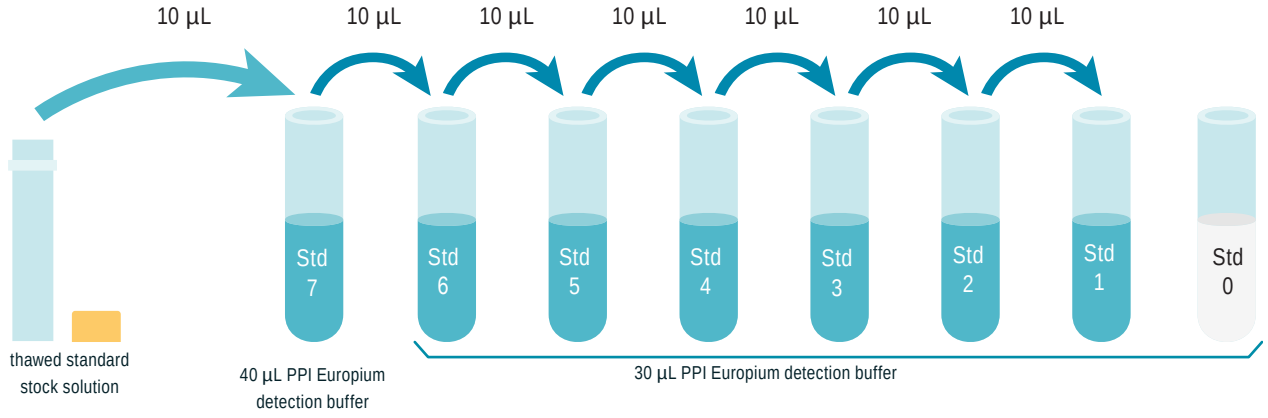
500 TESTS		10,000 TESTS	
Anti-Tag1 Eu Cryptate Antibody			
Dilute 50-fold the 50X stock solution (thawed reagent) of Anti-Tag1 Eu Cryptate Antibody with PPI Europium Detection Buffer : e.g. 50 µL of reconstituted Anti-Tag1 Eu Cryptate Antibody stock solution + 2450 µL of PPI Europium Detection Buffer.			Dilute 50-fold the 50X stock solution (thawed reagent) of Anti-Tag1 Eu Cryptate Antibody with PPI Europium Detection Buffer : e.g. 1 mL of reconstituted Anti-Tag1 Eu Cryptate Antibody stock solution + 49 mL of PPI Europium Detection Buffer.
Anti-Tag2 d2 reagent			
Dilute 50-fold the 50X stock solution (thawed reagent) of Anti-Tag2 d2 reagent with PPI Europium Detection Buffer : e.g. 50 µL of reconstituted Anti-Tag2 d2 reagent stock solution + 2450 µL of PPI Europium Detection Buffer.			Dilute 50-fold the 50X stock solution (thawed reagent) of Anti-Tag2 d2 reagent with PPI Europium Detection Buffer : e.g. 1 mL of reconstituted Anti-Tag2 d2 reagent stock solution + 49 mL of PPI Europium Detection Buffer.
anti-Tag HTRF detection solutions (pre-mixed)			
Pre-mix the two ready-to-use anti-Tag HTRF detection solutions just prior to dispensing the reagents: e.g. 2.5 mL of Anti-Tag1 Eu Cryptate Antibody + 2.5 mL of Anti-Tag2 d2 reagent			Pre-mix the two ready-to-use anti-Tag HTRF detection solutions just prior to dispensing the reagents: e.g. 20 mL of Anti-Tag1 Eu Cryptate Antibody + 20 mL of Anti-Tag2 d2 reagent

TO PREPARE WORKING IL23-IL23R STANDARD SOLUTIONS:

- Each well requires 2 µL of standard.
- In order to counteract any standard sticking, we recommend changing tips between each dilution.

A recommended standard dilution procedure is listed and illustrated below:

1. Thaw the standard vial, the concentration of the IL23-IL23R standard stock solution = 5 µM (5 000 000 pM)
2. Prepare the following dilutions:
   •Dilute the thawed standard stock solution 5-fold with PPI Europium detection buffer.
   In practice: take 10 µL of stock solution and add it to 40 µL of PPI Europium detection buffer. Mix gently. This yields the high standard (Std 7: 1 000 000 pM) for the top of the curve.
   •Use the high standard (Std 7) to prepare the standard curve using 4-fold serial dilutions as follows:
   - Dispense 30 µL of PPI Europium detection buffer into each vial from Std 6 to Std 0
   - Add 10 µL of standard to 30 µL of PPI Europium detection buffer, mix gently and repeat the serial dilution to make standard solutions: std6, std5, std4, std3, std2, std1.
   This will create 7 standards for the analyte. Std 0 is PPI Europium detection buffer alone.



STANDARD	SERIAL DILUTIONS	WORKING SOLUTIONS	FINAL CONCENTRATIONS
Standard Stock solution	Thaw the IL23-IL23R standard stock solution	5 µM (5 000 000 pM)	
Standard 7	10 µL standard stock solution + 40 µL PPI Europium detection buffer	1 000 000 pM	1 000 00 pM
Standard 6	10 µL Standard 7 + 30 µL PPI Europium detection buffer	250 000 pM	25 000 pM
Standard 5	10 µL Standard 6 + 30 µL PPI Europium detection buffer	62 500 pM	6 250 pM
Standard 4	10 µL Standard 5 + 30 µL PPI Europium detection buffer	15 625 pM	1 563 pM
Standard 3	10 µL Standard 4 + 30 µL PPI Europium detection buffer	3 900 pM	390 pM
Standard 2	10 µL Standard 3 + 30 µL PPI Europium detection buffer	977 pM	97.7 pM
Standard 1	10 µL Standard 2 + 30 µL PPI Europium detection buffer	244 pM	24.4 pM
Standard 0	30 µL PPI Europium detection buffer	0 pM	0 pM

ASSAY MANUAL

	Standard	Samples
STEP 1 	Dispense into each standard well 2 µL of standard 4 µL of Tag1-IL23 4 µL of Tag2-IL23R.	Dispense into each sample well 2 µL of compound/antibody or buffer 4 µL of Tag1-IL23 4 µL of Tag2-IL23R.
STEP 2 	Dispense into all standard & sample wells 10 µL of pre-mixed Anti-Tag1 Eu Cryptate Antibody and Anti-Tag2 d2 reagent	
STEP 3 	Seal the plate and incubate for 2 H.at room temperature	
STEP 4 	Remove the plate sealer and read on an HTRF® compatible reader.

DATA REDUCTION & INTERPRETATION

1. Calculate the ratio of the acceptor and donor emission signals for each individual well.

$$\text{Ratio} = \frac{\text{Signal 665 nm}}{\text{Signal 620 nm}} \times 10^4$$

2. Calculate the % CVs. The mean and standard deviation can then be worked out from ratio replicates.

$$\text{CV (\%)} = \frac{\text{Standard deviation}}{\text{Mean Ratio}} \times 100$$

For more information about data reduction, please visit www.revvity.com

RESULTS

The data shown below must not be substituted for the data obtained in the laboratory, and should be considered only as an example.

Readouts on HTRF® compatible reader.

Note that results may vary from one HTRF® compatible reader to another.
